

# Mind maps

A mind map is a **pre-production document**.

They are made during the **planning stage** of a product's development, often right at the beginning.

They are a way of coming up with **ideas** for a project.

# Mind maps

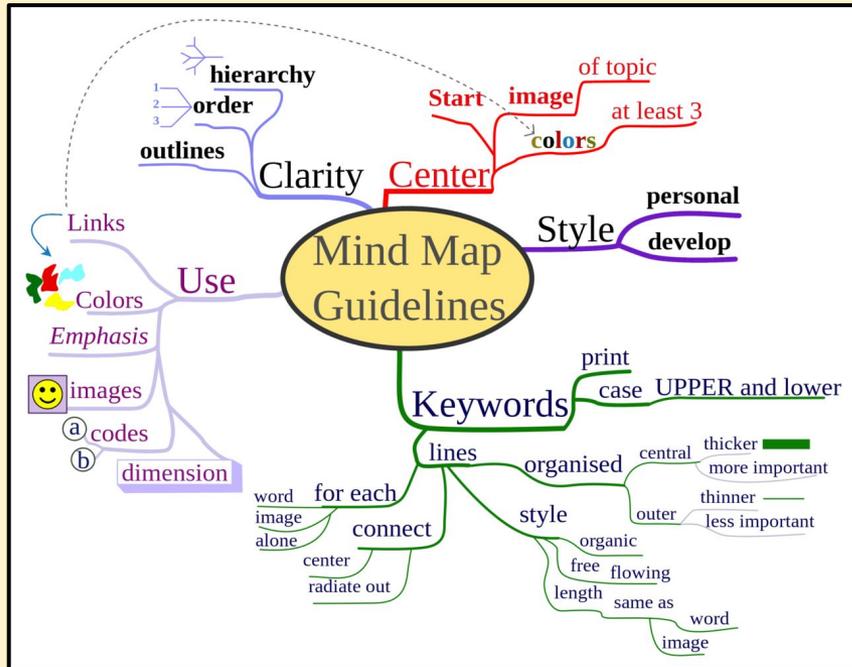

## Purposes:

- brainstorm ideas for a project
- to quickly gather ideas from people involved in the project
- let **designers** share ideas about a project
- gather ideas for content
- show links between different parts of a project
- to help the **project manager** get ideas about what a project involves
- to check the **design team's** ideas with the **client**

Possible **audiences** for mind maps are shown in **bold** on the right

# Mind maps

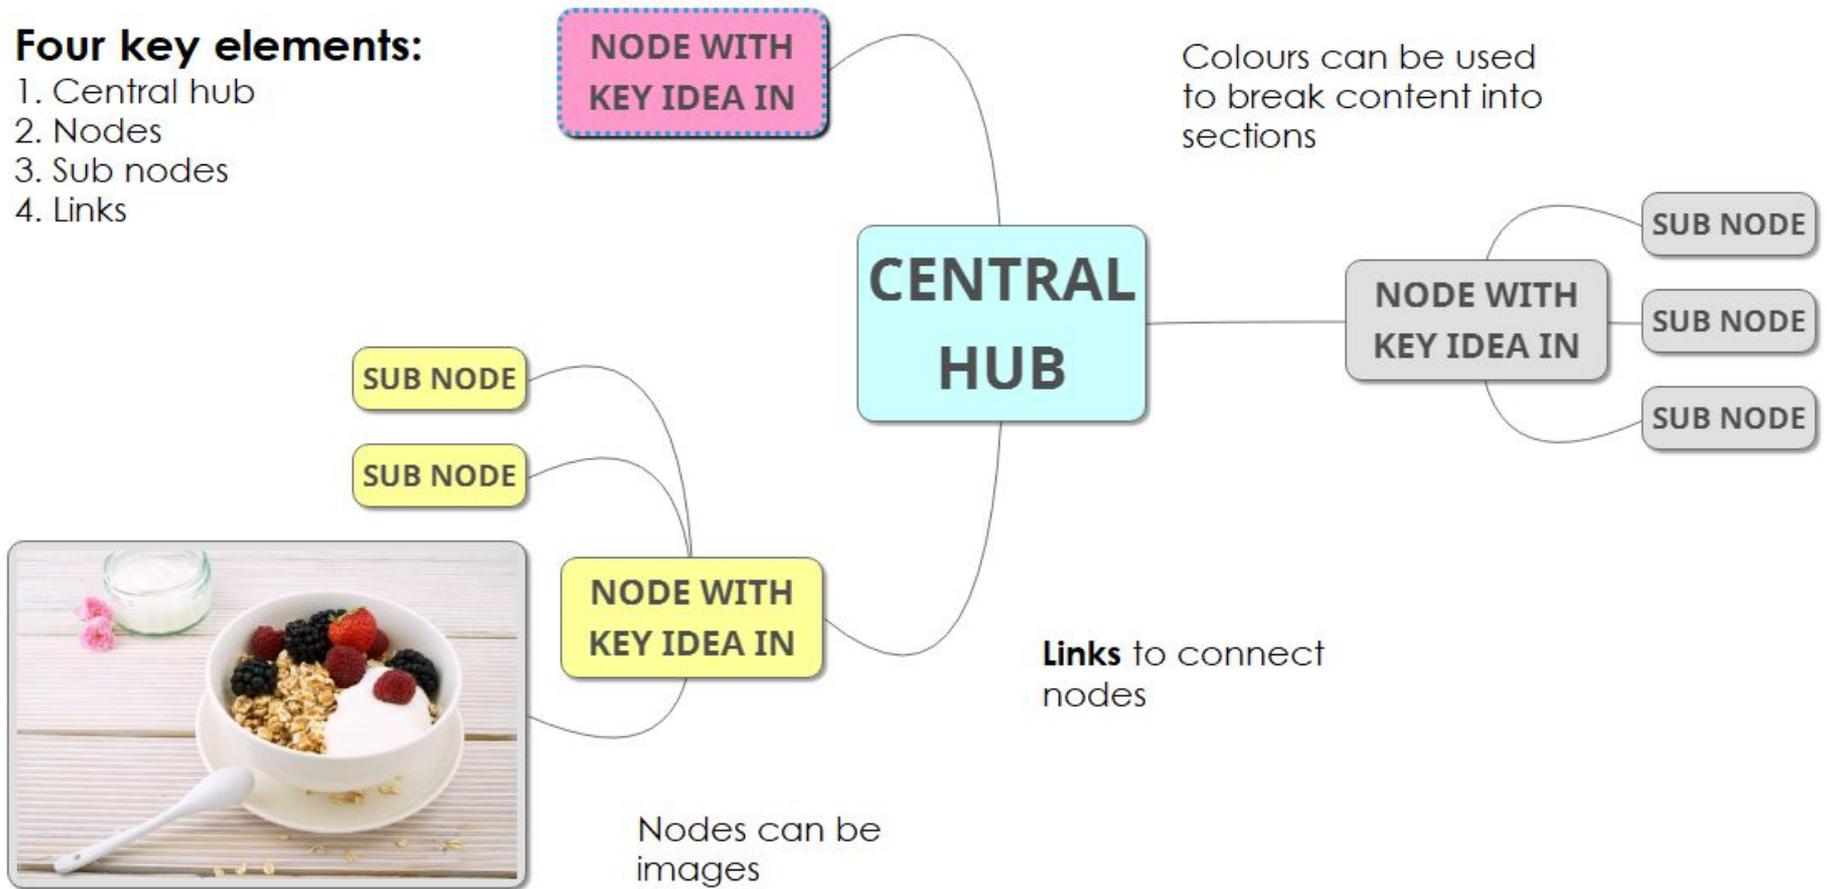

## There are four key elements of mind maps:

- **central hub** - the bit in the middle
- **nodes** - the first set of ideas coming off the centre
- **sub-nodes** - the sets of ideas coming off of each node
- **links** - the lines between the nodes

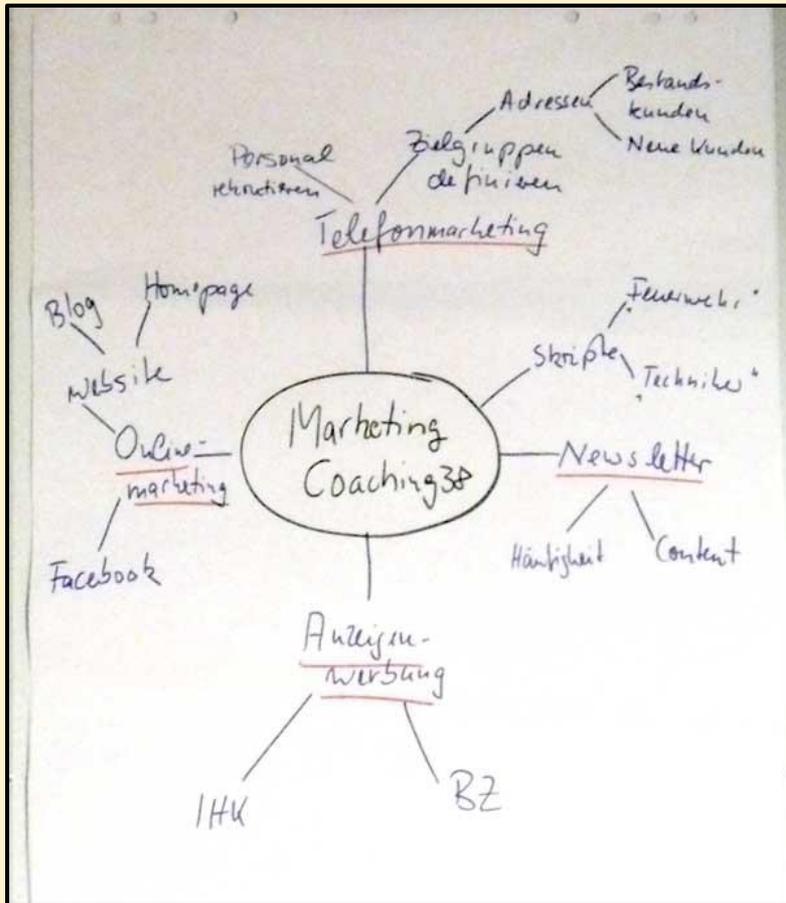

Learn these four things. They are the key parts of mind maps

## Four key elements:

1. Central hub
2. Nodes
3. Sub nodes
4. Links

# Mind maps

Mind maps might also include:

- **keywords**
- **images** to represent ideas
- **logos**
- **sounds or video** - on a digital mind map
- **a title**
- **colours** to help organise points into sections

Mind maps are about ideas. They don't include sentences or annotations

# Mind maps

Mind maps can be produced as:

- physical products
- digital products

A physical product is something you create on paper or that you can touch.

A digital product is something produced directly on a computer.

## Physical diagrams:

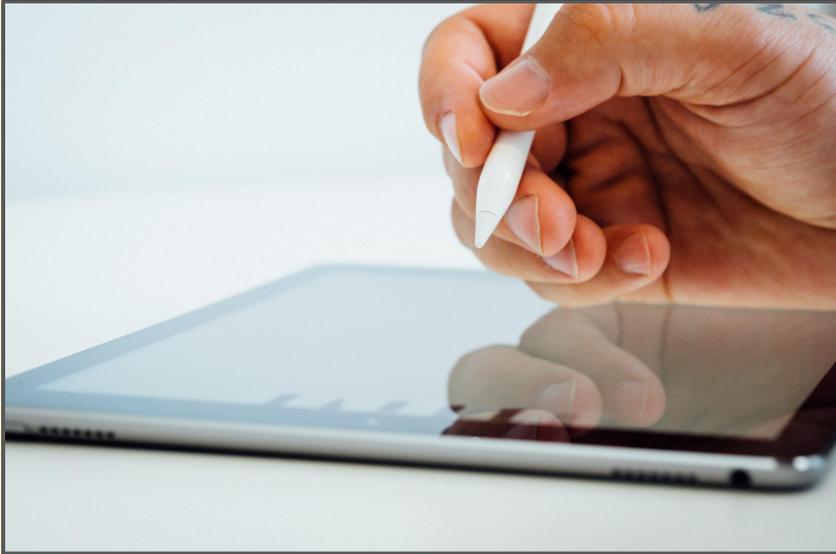

The easiest way to produce a mind map is on paper, a flip chart or a whiteboard.

To get this on to a computer (and convert it into a **digital document**) you can:

- **scan** it using a scanner
- take a photograph of it using a **digital camera** (e.g. on your phone)

Many printers include scanners.

# Mind maps

**Hardware** that could be used includes:

- mouse
- keyboard
- monitor (screen)
- touch screen (e.g. phone or tablet)
- **graphics tablet** (photo above)
- digital camera

## Digital diagrams:

These can be made using:

- **Office software** such as Word or PowerPoint
- A **graphics package** (e.g. Paint or Photoshop)
- An **online tool** (e.g. [Mind Mup](#)). These have the advantage that people can work together to produce diagrams and they can easily be shared

# Mind maps

## Summary:

- diagrams produced early in the design stage
- allow ideas to be brainstormed and shared quickly
- include basic ideas (sometimes including images)
- help to decide what the project might include and to make decisions about content
