

WalkyTalk is a new smartphone app which will encourage older adults (aged 50+) to exercise more by walking in groups around their local town. Users will be able to set up walks and to join walks set up by other users in their area. Users will be able to send messages to each other and see a map showing walks that have been set up. As well as walking, the aim is that users will also talk to each other, reducing social isolation in older people.

WalkyTalk would like to see some designs for the smartphone app home screen at a development meeting.

(a) Create a pre-production visualisation diagram for the home screen for the smartphone app.

Marks will be awarded for:

- content
- layout
- fitness for purpose
- annotations to justify decisions

[10 marks]
